Hook Description	Implementation in Core
hook_access($op, $node, $account) Define access restrictions.	modules/poll/poll.module
hook_actions_delete() Execute code after an action is deleted.	
hook_block($op = 'list', $delta = 0, $edit = array()) Declare a block or set of blocks.	modules/comment/comment.module
hook_boot() Perform setup tasks. See also, hook_init.	N/A
hook_comment($a1, $op) Act on comments.	modules/user/user.module
hook_cron() Perform periodic actions.	modules/search/search.module
hook_db_rewrite_sql($query, $primary_table, $primary_field, $args) Rewrite database queries, usually for access control.	modules/node/node.module
hook_delete(&$node) Respond to node deletion.	modules/poll/poll.module
hook_disable() Perform necessary actions before module is disabled.	N/A
hook_elements() Allows modules to declare their own form element types and specify their default values.	modules/system/system.module
hook_enable() Perform necessary actions after module is enabled.	modules/menu/menu.module
hook_exit($destination = NULL) Perform cleanup tasks.	modules/statistics/statistics.module
hook_file_download($file) Allow file downloads.	modules/user/user.module
hook_filter($op, $delta = 0, $format = -1, $text = '') Define content filters.	modules/filter/filter.module
hook_filter_tips($delta, $format, $long = false) Provide tips for using filters.	modules/filter/filter.module
hook_flush_caches() Add a list of cache tables to be cleared.	
hook_footer($main = 0) Insert closing HTML.	N/A
hook_form(&$node, &$param) Display a node editing form.	modules/search/search.module
hook_forms() Map form_ids to builder functions.	modules/search/search.module
hook_form_alter(&$form, $form_state, $form_id) Perform alterations before a form is rendered.	modules/locale/locale.module
hook_help($path, $arg) Provide online user help.	modules/openid/openid.module,
hook_hook_info() Expose a list of triggers (events) that your module is allowing users to assign actions to	
hook_init() Perform setup tasks. See also, hook_boot.	modules/forum/forum.module
hook_insert($node) Respond to node insertion.	modules/poll/poll.module
hook_install() Install the current version of the database schema, and any other setup tasks.	N/A

hook_link($type, $object, $teaser = FALSE) Define internal Drupal links.	modules/node/node.module
hook_link_alter(&$links, $node) Perform alterations before links on a node are rendered. One popular use of this hook is to add/delete links from other modules.	modules/forum/forum.module
hook_load($node) Load node-type-specific information.	modules/path/path.module
hook_mail($key, &$message, $params) Prepare a message based on parameters. See drupal_mail for more.	modules/update/update.module
hook_mail_alter(&$message) Alter any aspect of the emails sent by Drupal	N/A
hook_menu() Define menu items and page callbacks.	modules/path/path.module
hook_menu_alter(&$callbacks) Alter the data being saved to the {menu_router} table after hook_menu is invoked.	modules/upload/upload.module
hook_menu_link_alter(&$item, $menu) Alter the data being saved to the {menu_links} table by menu_link_save().	modules/forum/forum.module
hook_nodeapi(&$node, $op, $a3 = NULL, $a4 = NULL) Act on nodes defined by other modules.	modules/path/path.module
hook_node_access_records($node) Set permissions for a node to be written to the database.	N/A
hook_node_grants($account, $op) Inform the node access system what permissions the user has.	N/A
hook_node_info() Define module-provided node types.	modules/poll/poll.module modules/blog/blog.module modules/forum/forum.module
hook_node_operations() Add mass node operations.	modules/node/node.admin.inc
hook_node_type($op, $info) Act on node type changes.	modules/taxonomy/taxonomy.module
hook_perm() Define user permissions.	modules/search/search.module
hook_ping($name = '', $url = '') Ping another server.	modules/ping/ping.module
hook_prepare(&$node) This is a hook used by node modules. It is called after load but before the node is shown on the add/edit form.	modules/node/node.module
hook_profile_alter(&$fields, $account) Perform alterations profile items before they are rendered. You may omit/add/re-sort/recategorize, etc.	N/A
hook_requirements($phase) Check installation requirements and do status reporting.	modules/update/update.module
hook_schema() Define the current version of the database schema.	N/A
hook_search($op = 'search', $keys = null) Define a custom search routine.	modules/user/user.module
hook_search_item($item) Format a search result.	N/A
hook_search_preprocess($text) Preprocess text for the search index.	N/A

hook_submit(&$node) This is a hook used by node modules. It is called after validation has succeeded and before insert/update. It is used to for actions which must happen only if the node is to be saved.	modules/node/node.module
hook_system_info_alter() Alert the information parsed from modules and theme .info files	
hook_taxonomy($op, $type, $array = NULL) Act on taxonomy changes.	modules/forum/forum.module
hook_term_path() Allows modules to provide an alternative path for the terms it manages	
hook_theme() Register a module's (or theme's) theme implementations.	modules/search/search.module
hook_theme_registry_alter() Alter the theme registry information returned from hook_theme()	
hook_translated_menu_link_alter() alter a menu link after it's translated, but before it's rendered	
hook_uninstall() Remove any tables or variables that the module sets.	N/A
hook_update($node) Respond to node updating.	modules/poll/poll.module
hook_update_index() Update Drupal's full-text index for this module.	modules/node/node.module
hook_update_N() Perform a single update. For each patch which requires a database change add a new hook_update_N() which will be called by update.php.	N/A
hook_user($op, &$edit, &$account, $category = NULL) Act on user account actions.	modules/dblog/dblog.module
hook_user_operations() Add mass user operations.	modules/user/user.module
hook_validate($node) Verify a node editing form.	modules/poll/poll.module
hook_view($node, $teaser = FALSE, $page = FALSE) Display a node.	modules/poll/poll.module
hook_watchdog($log_msg) Log an event message	modules/dblog/dblog.module
hook_xmlrpc() Register XML-RPC callbacks.	modules/blogapi/blogapi.module
module_hook() Determine whether a module implements a hook	
module_implements() Determine which modules are implementing a hook	
module_invoke() Invoke a hook in a particular module	
module_invoke_all() Invoke a hook in all enabled modules that implement it.
